Award-Winning Projects, Exceptional Quality:

Electrical Alliance wins 15 Awards from "Mid-Atlantic Construction" Magazine

Smithsonian Donald W. Reynolds Center for American Art and Portraiture, Lincoln Gallery

Mid-Atlantic Construction magazine's Best of 2006 competition attracted more entries than ever. And Electrical Alliance contractors worked on more award-winning buildings than ever.

The Best of 2006 awards highlights the best new construction projects in the mid-Atlantic region, and covers over 20 categories. It is an annual award presented by the magazine.

The high-quality craftsmanship that is typical of Alliance electrical contractors helped propel them to awards on 15 projects, including the overall Project of the Year winner, the Donald Reynolds Center for American Art and Portraits in Washington, DC.

"We know that our union electricians deliver a superior product, and this is our proof," says Sunny Vargas, President of VarcoMac, and Electrical Alliance trustee. "We're proud of their work and of this accomplishment."

Extensive training is the key to delivering that advantage. The Electrical Alliance electricians have thousands of hours of training—both on-site and in the classroom. Classroom study and hands-on laboratory training allow apprentices an opportunity to learn in an environment that will enable them to be more productive electricians. That enables them to solve the complex problems that they'll see in the field, and understand how to use the latest technologies.

The quality of electrical work can be seen throughout the greater-Washington area. Check out this year's *Mid-Atlantic Construction's* Best

Electrical Alliance contractors continue to show their aptitude towards sustainable building. Our contractors won the Project of the Year in the Environmental category for Sidwell Friends School and two Awards of Merit for the Federal Office Building N. 8 in Washington, DC and Potomac Yards 1 & 2 in Northern Virginia.

The alliance sets itself apart through high quality training that shows through on the job site. And having a background and knowledge in green building is another example of where training and experience help exceed customer expectations.
